DETAILED ACTION

1. In response to the U.S. Patent Application Ser. No. 10/642,958 filed on Aug. 18, 2003, claims **1-36** are pending in the application.

Examiner's amendment

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The specification has been amended as follows:

Page 1, line 2, delete "(allowed)".

Page 1, line 3, after "GENERATOR," insert -- **now U.S. Pat. No. 6,643,192, issued on Nov. 4, 2003** --.

The examiner's amendment has been made in order to place the application in a condition for allowance.

Priority

3. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 10/032,277, filed on Dec. 21, 2001.

Information Disclosure Statement

4. This office acknowledges receipt of the following items from the Applicant:
Information Disclosure Statements (IDS) filed Aug. 18, 2003.
Information disclosed and listed on PTO 1449 was considered.

Examiner's Statement of Reasons for Allowance

5. Claims **1-36** are allowed.

Takeuchi et al. (U.S. Pat. No. 6,452,437) and Venkatesh et al. (U.S. Pat. No. 6,269,026) disclose a flash memory device having a pulse generator similar to that of the present application, but fail to teach:

"a bipolar junction transistor having a base coupled to the output node of the threshold signal generator, a collector coupled to the output node of the threshold signal generator, and an emitter coupled to a second potential node through at least one resistive element; and at least one resistive element coupled in parallel with the bipolar junction transistor, each having an input coupled to the collector of the bipolar junction transistor and an output coupled to the emitter of the bipolar junction transistor" as claimed in the independent claim **1**; or

"a bipolar junction transistor having a base coupled to the output node of the threshold signal generator, a collector coupled to the output node of the threshold signal generator, and an emitter coupled to a second potential node through at least one resistive element; at least one resistive element coupled in parallel with the bipolar junction transistor, each having an input coupled to the collector of the bipolar junction transistor and an output coupled to the emitter of the bipolar junction transistor; and at least one resistive element coupled in series with the bipolar junction transistor, having an input coupled to the emitter of the bipolar junction transistor and an output coupled to the second potential node" as claimed in the independent claim **12**; or

"a bipolar junction transistor having a base coupled to the output node of the threshold signal generator, a collector coupled to the output node of the threshold signal generator, and an emitter coupled to a second potential node through at least one resistive element; and at least one resistive element coupled in parallel with the bipolar junction transistor, each having an input coupled to the collector of the bipolar junction transistor and an output coupled to the emitter of the bipolar junction transistor" as claimed in the independent claim **19**; or

"a bipolar junction transistor having a base coupled to the output node of the threshold signal generator, a collector coupled to the output node of the threshold signal generator, and an emitter coupled to a second potential node through at least one resistive element; at least one resistive element coupled in parallel with the bipolar junction transistor, each having an input coupled to the collector of the bipolar junction transistor and an output coupled to the emitter of the bipolar junction transistor; and at least one resistive element coupled in series with the bipolar junction transistor, having an input coupled to the emitter of the bipolar junction transistor and an output coupled to the second potential node" as claimed in the independent claim **30**.

Any comments considered necessary by applicants must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comment on Statement of Reasons for Allowance".
